Module Name:	Defect and Test Case Management
Test Case ID:	TC01–TC09
Tester Name:	
Test Case Description:	Apply defect management, test case management, and execution report generation using Bugzilla and TestLink workflows.
Prerequisites:	Bugzilla and TestLink are available; required project/test-suite access and test data are available.
Environment Information:	

TC ID	TEST CASE	TEST STEPS	INPUT	EXPECTED RESULT	ACTUAL RESULT	STATUS
TC01	Create test case in TestLink	Open TestLink, create/select a test suite, and add a new test case.	Test case details	Test case should be created and saved successfully in TestLink.	Test case was created and saved successfully in TestLink.	Pass
TC02	Execute test case in TestLink	Open a test case in TestLink and execute it with the required test data.	Test case and test data	Test case execution should be recorded successfully.	Test case execution was recorded successfully in TestLink.	Pass
TC03	Mark test case Pass	Execute a test case whose actual result meets the expected result and mark it Pass.	Passing execution result	Test case should be recorded with PASS status.	Test case was successfully marked as PASS in TestLink.	Pass
TC04	Mark test case Fail	Execute a test case whose actual result does not meet the expected result and mark it Fail.	Failing execution result	Test case should be recorded with FAIL status.	Test case was successfully marked as FAIL in TestLink.	Pass
TC05	Create defect in Bugzilla	Open Bugzilla and create a defect for a failed test case.	Defect title, description and reproduction details	Defect should be created successfully with a unique defect ID.	Defect was created successfully in Bugzilla with a unique defect ID.	Pass
TC06	Assign defect severity	Open the created Bugzilla defect and assign the required severity.	Defect severity	Selected severity should be saved for the defect.	Defect severity was assigned and saved successfully.	Pass
TC07	Assign defect priority	Open the Bugzilla defect and assign the required priority.	Defect priority	Selected priority should be saved for the defect.	Defect priority was assigned and saved successfully.	Pass
TC08	Retest defect	After the defect is addressed, execute the related test case again and verify the result.	Fixed defect and related test case	Retest result should be recorded and the defect should be updated according to the actual result.	Defect was retested and the test result was recorded successfully.	Pass
TC09	Generate execution report	Review the TestLink execution results and generate the execution report.	Test execution results	Execution report should be generated and should reflect the recorded test results.	Test execution report was generated successfully in TestLink.	Pass
