PRACTICAL 1

Aim: Understand SDLC and STLC phases for a real-world software project and identify testing activities performed during each development stage.

Used Website: Automation Exercise

TC ID: TC01

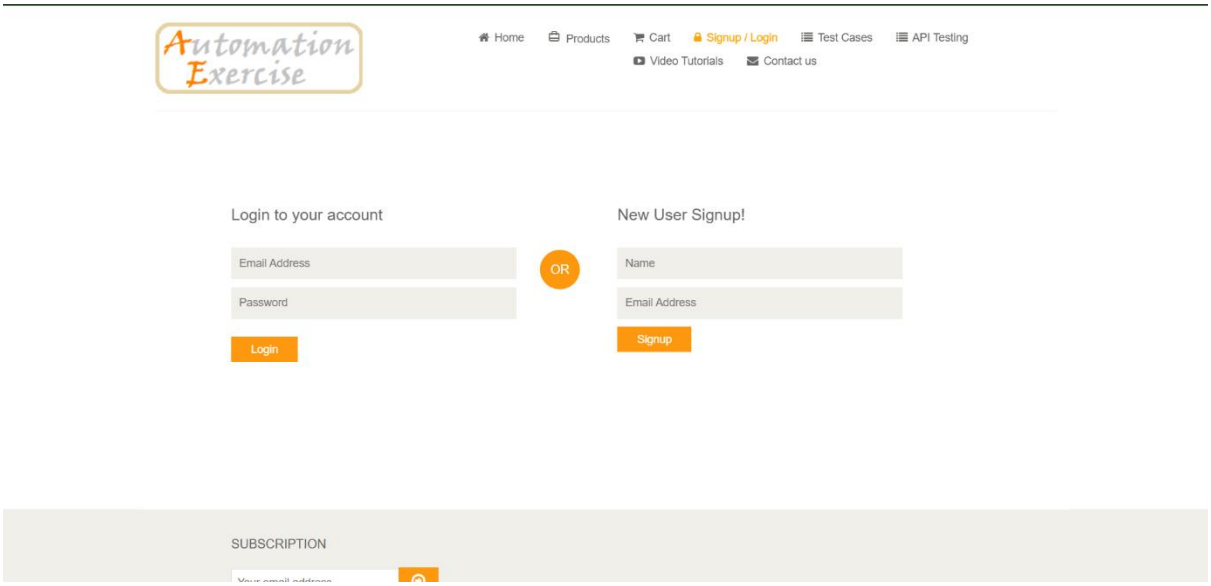

Test Case: Verify Login page is accessible

Expected Result: The Login page should be accessible.

Actual Result: Login page accessed

Status: PASS

Execution Screenshot:

TC ID: TC02

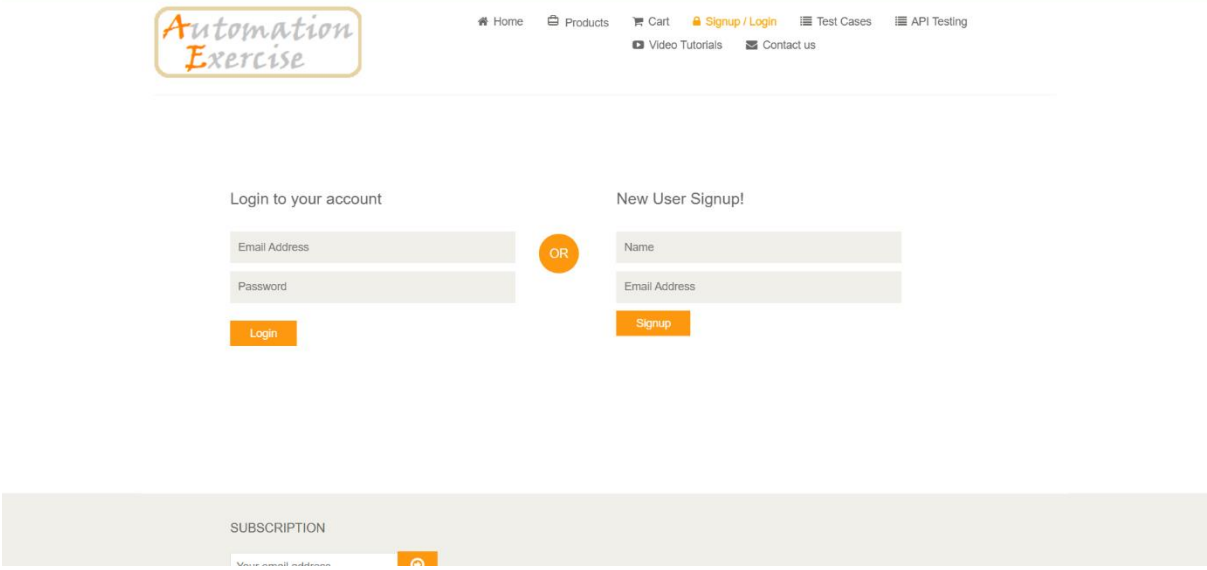

Test Case: Verify Signup page is accessible

Expected Result: The Signup page should be accessible.

Actual Result: sign up page accessed

Status: PASS

Execution Screenshot:

TC ID: TC03

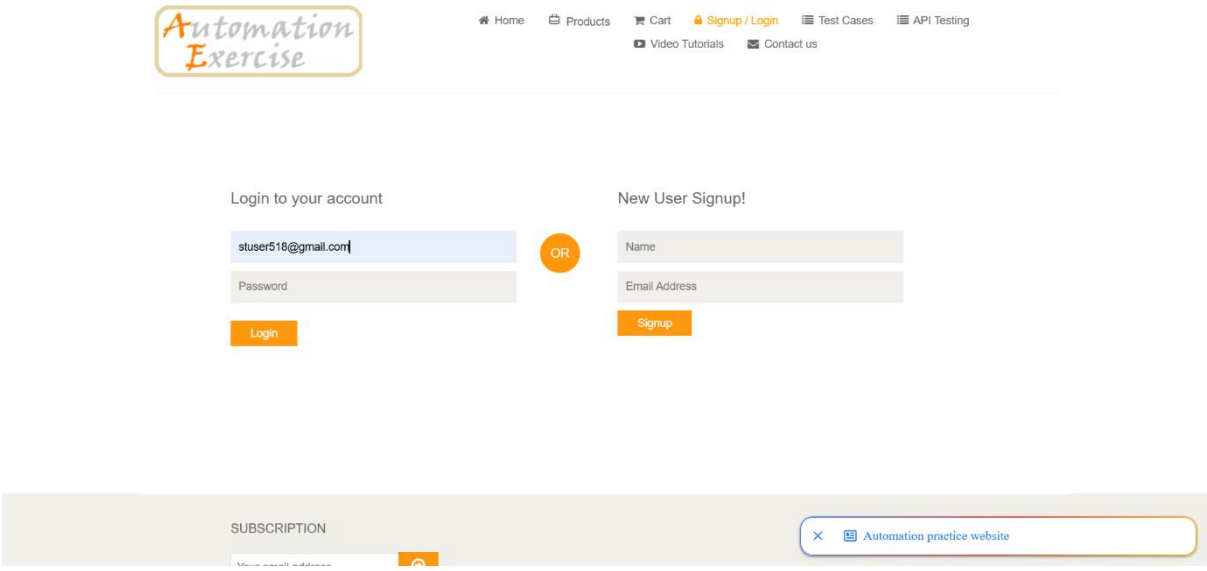

Test Case: Verify email field is available

Expected Result: The email field should be available for entering an email address.

Actual Result: email field available and entered

Status: PASS

Execution Screenshot:

TC ID: TC04

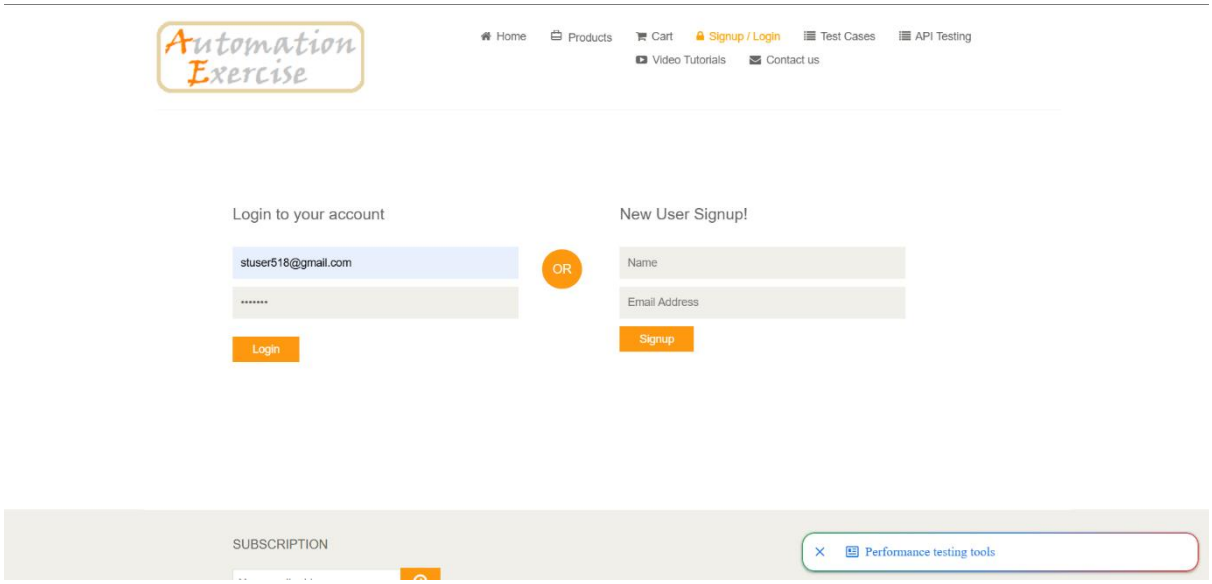

Test Case: Verify password field is available

Expected Result: The password field should be available for entering a password.

Actual Result: password field is available and entered

Status: PASS

Execution Screenshot:

TC ID: TC05

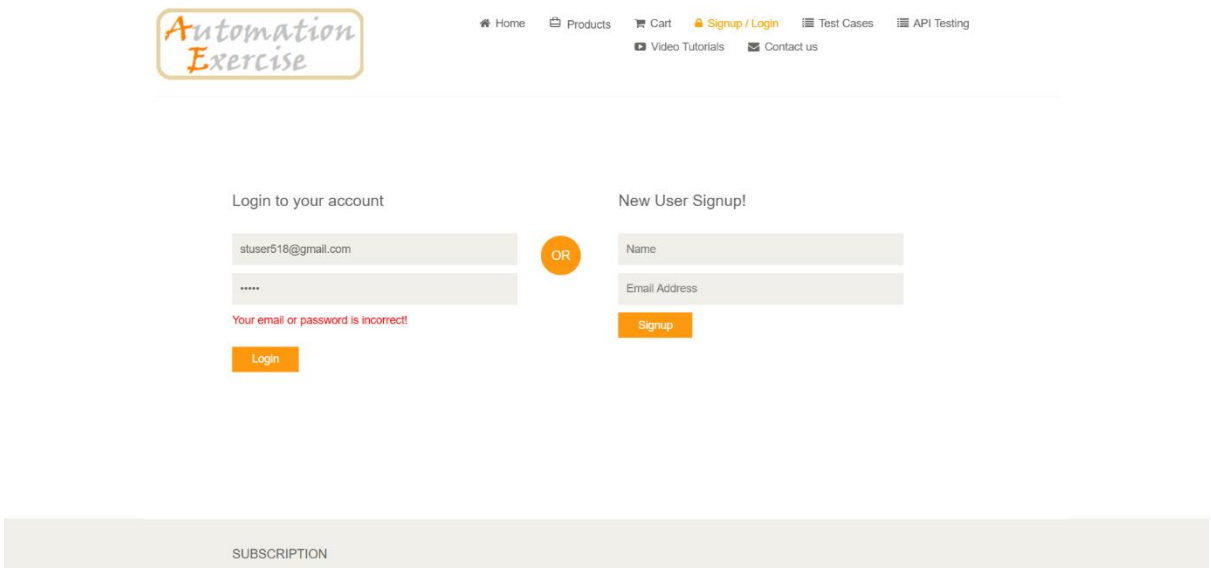

Test Case: Verify Login functionality

Expected Result: A user with valid credentials should be able to log in successfully.

Actual Result: user could not log in

Status: FAIL

Execution Screenshot:

TC ID: TC06

Test Case: Verify Logout functionality

Expected Result: A logged-in user should be able to log out successfully.

Actual Result: user could not log out

Status: FAIL

Execution Screenshot: [user not sign up so there was not log out option]

SDLC/STLC Testing Activity Mapping

Requirement Analysis: Identify and review testable requirements.

Test Planning: Define testing scope, resources, schedule and test approach.

Test Case Design: Prepare test cases and test data.

Environment Setup: Prepare the required test environment.

Test Execution: Execute test cases and record results.

Defect Reporting and Retesting: Report defects, verify fixes and perform regression testing.
